Mingyu Sung

AI Research Engineer — Efficient GenAI Inference (Quantization · Caching · Acceleration)

Nota AI, Platform Team (Quantizer) · South Korea

AI Research Engineer at Nota AI (Platform Team, Quantizer part). Ph.D. in Artificial Intelligence (KNU, 2026). Works on efficient generative-model inference: model quantization, diffusion/LLM cache acceleration, CUDA kernel optimization, split computing, and training-free KV-cache compression. Core contributor to the Nunchaku CUDA acceleration engine (ICLR 2025 Spotlight); 15 merged PRs across Nunchaku, ComfyUI-nunchaku, ByteDance DreamO, and Hugging Face Transformers.

EXPERIENCE

AI Research Engineer — Platform Team, Quantizer Part 2026.02 – Present

Nota AI

- LLM/VLM quantization platform: GPTQ, AWQ, SmoothQuant, QuaRot/SpinQuant pipelines; NVFP4 and GGUF export paths; MoE all-expert calibration; KV-cache quantization.
- Model enablement & evaluation: EXAONE 4.0 / MoE, Qwen3 / 3.5(-VL), Phi-3 (LongRoPE), gpt-oss, embedding/reranker and video-diffusion (Wan, Cosmos) evaluation harnesses.
- K-EXAONE 236B (MoE) optimization for FuriosaAI's data-center NPU, with LG AI Research — ~71% model-size reduction at ~99.2% accuracy retention (GPQA 79.80, IFBench 68.98, AIME25 88.57); announced 2026-06-30.

EDUCATION

Ph.D., Artificial Intelligence 2021.08 – 2026.02

Kyungpook National University (KNU) · Thesis: Fast and Trustworthy Super-Resolution with VLM-Guided Diffusion Model

M.S., Computer Science 2019.09 – 2021.08

Kyungpook National University (KNU) · Thesis: Probabilistic Classification Method of Spiking Neural Network Based on Multi-Labeling of Neurons

B.S., Computer Science 2013.03 – 2019.08

Kyungpook National University (KNU)

RESEARCH

StreamPRS 2026

Single-context-prefill approximation of KVzip's reconstruction-based KV-cache eviction; contributions framed as Factorization / Method / System.

OPEN SOURCE

Nunchaku — Core Contributor 2025 – 2026-02

nunchux-ai/nunchaku · 9 merged PRs · CUDA acceleration engine for 4-bit neural networks (ICLR 2025 Spotlight, 3.9k+ stars)

- Cache optimizations — V2 FBCaching (#621), double FB cache, TeaCache batch processing (#601) — for 2–5x additional speedup
- IP-Adapter (XLabs flux-ip-adapter-v2) support (#418)
- Fixes: LoRA key mismatch (#557), ControlNet (#360, #452), Sana (#380), offload segfault (#440)
- Forward-pass tensor-op cleanup (#491)

ComfyUI-nunchaku — Contributor 2025

nunchux-ai/ComfyUI-nunchaku · 2 merged PRs · ComfyUI integration for the Nunchaku engine

- IP-Adapter support for ComfyUI (#305)
- Cache-mechanism file separation (#474)

DreamO — Contributor 2025

bytedance/DreamO · 1 merged PRs · ByteDance's unified image-customization framework

- Dynamic FBCache / DoubleFBCache support for Nunchaku engine integration (#104)

Transformers — Contributor 2026

huggingface/transformers · 3 merged PRs · Hugging Face Transformers library

- Fixed float16 overflow in Gemma4 vision pooler (#46277)
- Fixed Gemma `sliding_window` being halved on every config save/reload, a silent accuracy regression for EmbeddingGemma (#47940)
- Fixed `_init_weights` reading a quantized child's `weight`, which broke loading CLIP-family quantized checkpoints (#47921)

SELECTED PROJECTS

K-EXAONE 236B MoE Optimization (Nota AI × LG AI Research × FuriosaAI) ↗ — Quantization Engineer · 2026
Optimized the 236B-parameter MoE model for FuriosaAI's data-center NPU via targeted precision analysis of degradation-prone sections — ~71% size reduction with ~99.2% accuracy retention (GPQA 79.80 / IFBench 68.98 / AIME25 88.57).

LLM Inference Optimization (Samsung Challenge) — Lead Developer · 2024
Optimized pipeline for Phi-3 using Torch-TensorRT conversion and memory-aware dynamic batching to accelerate LLM inference.

Advanced CNC Machine Tool Diagnosis & Prognosis (KERI) — Lead Developer · 2023
Deep learning models for tool wear classification, anomaly detection, and RUL prognosis.

AI-based Intelligent CCTV (ABB Project) — AI Optimization Engineer · 2023
Optimized an LSTR behavior-detection model for edge devices via Knowledge Distillation (TransKD) and Deep Compression — 25x model compression.

Global Basic Research Laboratory (NRF Project) — Participating Researcher · 2022
Deep learning-based channel estimation (CNN denoising, self-supervised learning) for IRS-aided communication systems.

ML-based Sensor Data Analysis (JS System Project) — Lead Developer · 2022
ML-based sensor feature-importance extraction and model performance optimization.

AWARDS

Best Paper Award · KNU-EE Research Congress — 2025
A Novel VLM-Guided Diffusion Model for Remote Sensing Image Super-Resolution

SKILLS

Research	model quantization, KV-cache compression, diffusion/LLM inference acceleration, split computing, super-resolution, long-context evaluation
Programming	Python, C++, CUDA C, MATLAB
Frameworks & Tools	PyTorch, HuggingFace Transformers, TensorRT, Triton, flash-attn, Docker, Git, LaTeX
Methodology	preregistration, claims ledger, freeze discipline
Languages	Korean (native) · English (business fluent)
